

Erica Kim *Software Engineer*

erica.kim.yh@gmail.com | linkedin.com/in/ericakimyh | ericakim.dev | github.com/yoohyunk

TOOLS AND SKILLS

- React, React Native, TypeScript, Node.js, Next.js, Playwright, Python, Django, Flask, SQL, Docker, Github Actions
- Web & Mobile Development, Automated Testing, CI/CD, Workflow Automation, AI Agent Orchestration, MCP Integrations

PROFESSIONAL EXPERIENCE

Software Engineer, *Orbit Sales*

Feb 2026 – Present

- Integrated Figma MCP for design context and Playwright MCP for visual regression testing, reducing rework on AI-generated frontend code and preventing iOS-specific regressions that manual QA had been catching late.
- Developed the permissions and role-based routing layer for a multi-tenant field sales CRM which allows users to create admin accounts and assign more specific roles for their team members.
- Built a multi-channel notification system (SMS, email, websockets) which allows users to self-subscribe to data updates or get alerted when they have new revenue-generating events.
- Built and maintained third-party integrations connecting Orbit's CRM to Shopify, WooCommerce, Square, Google, Brevo, Mailchimp, and ClickShip via OAuth flows and webhook-driven sync pipelines.
- Created a self-healing webhook provisioning system which polls third-party webhooks and recreates them when they are not healthy which often happens with WooCommerce.
- Regularly implemented primary app features and customer requests, such as marketplace affiliate and B2B wholesale ordering, discount and commission management, and automated QuickBooks invoice generation for wholesale orders.

Freelance Software Engineer, *Meot.ca*

Nov 2025 – Present

- Delivered branding websites with Next.js and built automated lead generation pipelines in Python. Used Gemini via OpenRouter to source leads based on a heuristic for likelihood to convert on small web projects.
- Built a member retention system for a gym by ingesting fob access hardware data into the cloud and repackaging them into a Next.js admin app. Added features to detect member churn and produce monthly gym reports.

Software Engineer, *YYCFoodTrucks*

Jan 2025 – Oct 2025

- Delivered a Next.js scheduling and employee management app for Calgary's largest food truck operator. Assumed the role of team lead in a team of 5 developers.
- Developed API routes with role-based access controls and schemas that generate TypeScript types for validating inputs and outputs. Implemented row-level security in the backing PostgreSQL database.
- Designed and implemented automated constraint-based scheduling features which address the main problem of unoptimized, time-consuming manual scheduling.
- Configured Github Actions, Vercel, Jest, and ESLint to support automated deployments and local development experience.

SELECTED PROJECTS

AI Task Pipeline, *Agentic Conversation-to-PR Workflow*

- Agentic pipeline that turns team conversations into human-reviewed Jira tickets and pull requests: ingests Slack / meeting / calendar context, extracts action items with Claude (forced tool use), gates each step for human approval, deduplicates (JQL + Gemini embeddings), then runs coding agents in isolated git worktrees that open and revise PRs. Three-horizon agent memory across tasks.

Jobs Desktop (prototype), *Job Discovery and Résumé-Matching Desktop App*

- Local desktop app (ElectroBun / React / Bun / SQLite) that discovers postings across seven ATS platforms and LinkedIn and structures them with a small fast LLM (Gemini Flash-lite) under an enforced JSON schema. Uses a transparent scoring heuristic over an embedding so matches stay explainable; resume tailoring has anti-hallucination guardrails.

FairSplit Native App, *Group Expense Management App with Receipt Scanning*

- React Native + Django app for itemized group expenses; integrated a Hugging Face OCR model to parse receipts (merchant, timestamp, totals, line items) into PostgreSQL, receipts in S3.

EDUCATION

Diploma of Software Development, *Southern Alberta Institute of Technology*

Dec 2023 – Nov 2025

- 3.7/4 GPA

Bachelor of Computer Science, *Sungkyul University*

2020 – 2021
